

CHRONIC HEALTH CONDITIONS AND QUALITY OF LIFE

48%

of participants from SHOW's City of Milwaukee survey have 1 or more chronic disease

Asthma and diabetes were the most commonly reported chronic conditions

The majority of individuals with chronic disease said their condition impacted their quality of life

2 of 3 individuals with chronic conditions found daily tasks to be challenging

Body composition and weight did not impact quality of life of participants

Living with chronic disease can be challenging, and it can impact our day-to-day lives in many ways.

Access to care, community support and help from friends and family can reduce the burden of living with chronic conditions.
