

TEST YOUR PRIVATE WELL ANNUALLY

WHY SHOULD I TEST MY WELL?

Private well owners are responsible for regularly testing and maintaining their well. Unwanted substances known as contaminants can get into private well water.

Contaminants in your drinking water may lead to health problems. This makes private well testing important for better health.

Testing is often not required but is encouraged because many contaminants may not cause any change in your water's taste, color, or smell.

WHAT SHOULD I TEST FOR?

The Wisconsin Department of Natural Resources (DNR) recommends these tests for common contaminants that can be harmful to human health:

1 Bacteria

- Test once a year
- Test any time the well is modified
- Test any time there is a change in smell, taste, or color

3 Arsenic

- Test when a new well is installed
- Test yearly if arsenic was previously detected
- Test at least once every 5 years

2 Nitrate

- Test once a year
- Test before a pregnant person or infant drinks the water

? Additional Tests

Additional tests may be recommended for your situation. Please see go.wisc.edu/water-testing for more information.

WHERE CAN I REQUEST A TESTING KIT?

Additional certified labs at:
<https://go.wisc.edu/private-wells>

UWSP Water and Environmental Analysis Lab

Test kits are available for order online at: <http://go.wisc.edu/uwsp-homeowners-kit>

Need assistance?

Contact the lab at (715) 346-3209 or weal@uwsp.edu

OR find them online at <https://go.wisc.edu/uwsp-water-testing-lab>

What does testing cost?*

Homeowner's Package - \$60

Includes bacteria, Nitrates, pH, Alkalinity, Hardness, Iron

*Other kit options are available, call the lab for availability and pricing.

WHAT SHOULD I DO IF I HAVE HIGH LEVELS OF CONTAMINANTS?

1 General Questions?

Sheboygan County Division of Public Health
Environmental Health Program
